

AAG Sales API v2

Master version

Sales API v2

Date	Document version	Updated by	Comment
04/10/2021	V1.0	Ajdin Brandic	Quote Response message. CustomerProductGroup (String) refactored to CustomerProductGroup (Array) of string elements. Product/Info Response message. TecDocGenArt (String) refactored to CustomerProductGroup (Array) of string elements.
26/08/2022	V1.01	Ajdin Brandic & Disham Bhamber	Quote Request – added "IncludeVehicleDetails" tag; Quote Response – added VehicleDetails array; Product/Info Response – added ProductDescription tag; Product/Enquiry Response – added ProductDescription tag; Verification_id in the Header for all Messages;
20/04/2023	V1.02	Ajdin Brandic	Method /api/order/advance added
20/01/2024	V1.03	Ajdin Brandic	Method /api/order/stock added Term "Customer" replaced by "Integrator" to represent IT partner who are performing the API integration
25/03/2024	V1.04	Ajdin Brandic	Surcharge added to response of Quote, Enquiry, and Info methods; BrandLogoUrl added to response of Quote, and Info methods;
22/05/2024	V1.05	Ajdin Brandic	List of error codes updated
11/11/2024	V1.06	Ajdin Brandic	Quote/Classic method added in section 7
28/11/2024	V1.06	Ajdin Brandic	Quote/Classic method response. Added:
05/02/2025	V1.07	Ajdin Brandic	Order on-demand response – products element added

Introduction

Live Sales API endpoint: <https://sales.allianceautomotiveapis.co.uk/>

Test/Sandbox Sales API end point: <https://aag-sapi-uat1.aaguklabs.co.uk/>

To access the end points, an authorisation type API Key is required.

Key Term	Description	Example
Article	A master catalogue product that fits the vehicle	
Product Options	Products available the meet the criteria of the Article definition and are suitable cross references from Subs alternatives database	
VRM	Vehicle Registration Mark (the car reg, vehicle registration)	
TecDoc GenArt	Product group according to TecDoc catalogue categorisation	
MAM Autocat product group	Product group according to MAM Autocat categorisation	
CPG	Customer Product Group (usually TecDoc GenArt sent in the request message)	

Message sequence

When using Sales API v2 the following workflows will be accepted:

- Info -> Enquiry* -> Order
- Quote -> Enquiry* -> Order
- Quote -> Order* (accepted but not recommended)
- Quote Classic -> Enquiry** -> Order

* - Request message should contain a valid RequestLineId returned in the previous message response

** - Insert Quoteld value into the v2 request Enquiry:RequestLineId tag. The Enquiry method will respond with AAGLocationId which is required for Order On-Demand and Order Advance.

When using a combination of Sales API v1 Quote and Sales API v2 the following workflows will be accepted:

- Quote v1 -> Enquiry v2*** -> Order v2

*** - Insert v1 Quoteld value into the v2 request Enquiry:RequestLineId tag.

VerificationID authentication

Some accounts will require to provide additional form of authentication under message header parameter labelled "verification_id". Values of this field has a one-to-one relationship with the "customer_id" header parameter.

Each API integrator will be informed if their integration requires the additional authentication method.

1. /api/quote

Method Objective

To present the customer with a list of product options and their current availability based on the incoming vehicle registration (VRM) and customer product group (e.g. Brake Discs). Each response will contain an array of matching articles (as supplied from industry electronic catalogues) with product options available from AAG. Each product option will contain availability information from appropriate locations across our network.

Pre-requisites

The customer will be using either TecDoc GenArt product groups for product retrieval. If not, a bespoke customer mapping exercise will be required.

Request

Example Message Request

HTTP Header	Parameter	Value
	customer_id	QKF9999
	verification_id	
JSON Body		{ "CustomerProductGroup": "82", "VRM": "FN60KYP", "IncludeVehicleDetails": false }

Data Contract Inbound Request

HTTP Header	Parameter	Type	Multiplicity	Comments
	customer_id	string	required	Customer account reference
	verification_id	string		May be Required depending on integration setup
JSON Body	CustomerProductGroup	string	required	Usually the GenArt
	VRM	string	required	Vehicle registration
	IncludeVehicleDetails	boolean		Not required

Data Contract Outbound Response

JSON Body	Parameter	Type	Nulls?	Comments
	Header			
	SuccessFlag	boolean		True or False identifying success
	Message	string	Y	Response description
	ErrorCode	string	Y	Error code
	Body			
	Articles	[array]		Array of articles meeting the criteria of in the inbound request
	ArticleProvider	string		Supplier providing article details
	ArticleDescription	string		Primary article description
	CustomerProductGroup	[array]		An Array of one or more GenArts.
	FittingPosition	string		Fitting position
	AutocatProductGroup	string		The mapped Autocat group against CPG
	ImageUrl	string		Public URL of the image
	ArticleProperties	[array]		Array of article properties. Present in a grid/table format
	Name	string		Name of the property
	Value	string		Value of the property
	ProductOptions	[array]		List of products available to order for the article
	RequestLineId	string		A unique line level quote ref. Should be returned in Purchase Order (on-demand message).
	DisplayOrder	int		Recommended display order of products to the customer
	ProductId	string		AAG unique number for the product
	Brand	string		Brand of the product
	BrandLogoUrl	string		Brand logo
	BrandRating	string		AAG Brand rating of the product (Premium, Standard or Budget)
	CustomerPartNumber	string	Y	Customer's part number if known
	CustomerLockoutRating	string		A flag to indicate if product is sellable to the customer. Currently specific to Autopart. Example values: "OK FOR SUPPLY", "Unknown".
	RecMinOrdQty	int		Customers should round to this when ordering (unit of issue)
	CostPrice	double		Price of the product to the customer
	Surcharge	double		Surcharge (core cost) where applicable. Currently Not available to all accounts!
	Availability	[array]		Array of stock availability across AAG for the product option
	AagLocationId	int		Unique AAG id for the location
	AagBusinessUnit	string		Business unit of the location (Subs, FPS, Apec or Platinum)

	BranchCode	string	Newcastle
	LocationName	string	Friendly name of the location
	LocationType	string	Type of the location (Local, Buddy, RDC, NDC)
	QtyInStock	int	Total qty in stock of the product option
	EstDeliveryTime	string	Estimated delivery calculated from request time
	Priority	int	See below section
	VehicleDetails	[array]	
	Vrm	string	Vehicle Registration Number
	Vin	string	Vehicle Identification Number
	EngineNo	string	Engine Number
	EngineSize	string	Engine Capacity
	Fuel	string	Type of Fuel
	Make	string	Vehicle Make
	Model	string	Vehicle Model (Long)
	YearOfManufacture	string	Year of Manufacture
	DateRegistered	string	Date Registered
HTTP Response Code		int	Code to identify the quality of the response (201=OK, 200=Error)

Ref: Priority

Each product will have a recommended minimum order quantity (RecMinOrdQty) which is visible to customers and a minimum response quantity which is held in our systems. If the local branch does not have sufficient stock to meet either check, other locations will be added to the response until the totals are reached, resulting in a combination of Subs, RDCs, and NDCs. The Priority indicates the quickest delivery (1 being the fastest) and should be used by default if possible. However, if the customer's order requirements take them above the free stock of Priority location 1, then their user interface should switch them to Priority 2 (and so on) until the fulfilment can be reached.

NOTE: We advise against ordering the same part from multiple locations although this is possible.

2. /api/product/info

Method Objective

To provide Integrators with a method of retrieving information against a part number that they have obtained through other channels.

Pre-requisites

None

Example Message Request

	Parameter	Value
JSON Body	customer_id	QKF9999
	verification_id	
HTTP Header		{ "Products":[{"ProductId": "NPAPBD8077"}, {"ProductId": "NPAPBD4455"}] }

Data Contract Inbound Request

	Parameter	Type	Multiplicity	Comments
HTTP Header	customer_id	string	required	Customer account reference
	verification_id	string		May be Required depending on integration setup
JSON Body	Products	array	required	A collection of AAG unique product IDs
	ProductId	string	required	AAG unique product ID

Response

Example Message Response

Response Body
<pre>{ "Header": { "SuccessFlag": true, "Message": null, "ErrorCode": null }, "Body": { "Products": [{ "RequestLineId": "AAGQ1/1", "DisplayOrder": 1, "CustomerProductGroup": ["82"], "AutocatProductGroup": "", "ProductId": "NPAPBD8077", "ProductDescription": "Brake Pad", "Brand": "NAPA", "BrandLogoUrl": "https://www.autocatplus.co.uk/acweb/images/NPA/NAPALogo1.jpg", "BrandRating": "Standard", "CustomerPartNumber": null, "CustomerLockoutRating": "OK FOR SUPPLY", "RecMinOrdQty": 2, "CostPrice": 11.21, "Surcharge": 0.00, }, { "ProductId": "NPAPBD4455", "Message": "Product not found" }], "ProductsNotFound": [{ "ProductId": "NPAPBD4455", "Message": "Product not found" }] } }</pre>

```
}
}
```

Data Contract Outbound Response

	Parameter	Type	Nulls?	Comments
JSON Body	Header			
	SuccessFlag	boolean		True or False identifying success
	Message	string	Y	Response description
	ErrorCode	string	Y	Error code
	Body			
	Products	array		A collection of available products/parts
	RequestLineId	string		A unique line level quote ref. Should be returned in Enquiry & Purchase Order (on-demand message).
	ProductId	string		AAG unique number for the product
	ProductDescription	string		Brake Pad
	Brand	string		Brand of the product
	BrandLogoUrl	string		Brand logo
	BrandRating	string		AAG Brand rating of the product (Premium, Standard or Budget)
	CustomerProductGroup	[array]		General Article group as specified by TecDoc. An Array of one or more GenArts.
	AutocatProductGroup	string	Y	Autocat product group as specified by MAM Software
	CustomerPartNumber	string	Y	Customer's part number if known
	CustomerLockoutRating	string		A flag to indicate if product is sellable to the customer. Currently specific to Autopart. Example values: "OK FOR SUPPLY", "Unknown".
	RecMinOrdQty	int		Customers should round to this when ordering (unit of issue)
	CostPrice	double		Price of the product to the customer
	Surcharge	double		Surcharge (core cost) where applicable. Currently Not available to all accounts!
	DisplayOrder	int		Recommended display order of products to the customer
HTTP Response Code	ProductsNotFound	array		A collection of no AAG products/parts
	ProductId	string		Product number received in the request
	Message	string		System message
		int		Code to identify the quality of the response (200 or 201)

3. /api/product/enquiry

Method Objective

To provide Integrators with a way of enquiring on the availability and SLA of a product when the product ID and the desired quantity is already known. This method is often used to re-validate a saved basket to identify any availability changes before the order is placed.

Pre-requisites

This method assumes the integrator has already identified product(s) via the APIv1 Quote, APIv2 Quote, or Product Info methods. A valid RequestLineId must be provided with every request. Where the APIv1 Quote was used initially, the RequestLineId should be populated with the Quoteld value.

Request

Example Message Request

HTTP Header	Parameter	Value
	customer_id	QKF9999
	verification_id	
JSON Body		<pre>{ "Products": [{ "ProductId": "NPAPBD8077", "Qty": 1, "RequestLineId": "AAGQ1/1" }] }</pre>

Data Contract Inbound Request

HTTP Header	Parameter	Type	Multiplicity	Comments
	customer_id	string	required	Customer account reference
	verification_id	string		May be Required depending on integration setup
JSON Body	Products	array	required	A collection of AAG unique product IDs
	ProductId	string	required	AAG unique product ID
	Qty	int	optional	Requested quantity of product (defaults to 1)
	RequestLineId	string	required	The RequestLineId from the original quote

Response

Example Message Response

Response Body
<pre>{ "Header": { "SuccessFlag": true, "Message": null, "ErrorCode": null }, "Body": { "Products": [{ "RequestLineId": "AAGQ1/1", "ProductId": "NPAPBD8077", "ProductDescription": "Brake Pad", "RecMinOrdQty": 1, "CostPrice": 11.21, "Surcharge": 0.00, "Availability": [{ "AagLocationId": 212, "AagBusinessUnit": "LV Subs", </pre>

```

    "BranchCode": "SCKN",
    "LocationName": "CTS Middlesbrough",
    "LocationType": "Local",
    "QtyInStock": 2,
    "EstDeliveryTime": "10:36",
    "Priority": 1
  }
}
}],
"ProductsNotFound":[
  {
    "ProductId": "NAAPBD1071",
    "message":"Product not found"
  }
]
}
}

```

Data Contract Outbound Response

	Parameter	Type	Nulls?	Comments
	Header			
	SuccessFlag	boolean		True or False identifying success
	Message	string	Y	Response description
	ErrorCode	string	Y	Error code
	Body			
	Products	array		A collection of AAG products
	RequestLineId	string		As provided in the request message. Where the API v1 Quoteld was provided in the request a different value will be returned in this response message.
	ProductId	string		AAG unique number for the product
	ProductDescription	string		Brake Pad
	RecMinOrdQty	int		Customers should round to this when ordering (unit of issue)
	CostPrice	double		Price of the product to the customer
	Surcharge	double		Surcharge (core cost) where applicable. Currently Not available to all accounts!
	RecMinOrdQty	int		Customers should round to this when ordering (unit of issue)
	Availability	[array]		Array of stock availability across AAG for the product option
	AagLocationId	int		Unique AAG id for the location
	AagBusinessUnit	string		Business unit of the location (Subs, FPS, Apec or Platinum)
	BranchCode	string		BranchCode
	LocationName	string		Friendly name of the location
	LocationType	int		Type of the location (Local, Buddy, RDC, NDC)
	QtyInStock	int		Total quantity in stock of the product option
	EstDeliveryTime	string		Estimated delivery calculated from request time
	Priority	int		See earlier notes on Priority
	ProductsNotFound	array		A collection of no AAG products/parts
	ProductId	string		Product number received in the request
	Message	string		System message
Response Code		int		Code to identify the quality of the response (200 and 201)

4. /api/order/on-demand

Method Objective

This method is used for on-demand orders only. Integrators will need to use the availability information from one of the above methods to inform AAG how many of each product they require and from which location they want to order it from, acknowledging the advisory SLA previously returned. A final stock check will be completed by AAG before confirming the order.

Pre-requisites

This method assumes that the Integrator had obtained Availability information from Product Enquiry method. The Integrator is responsible for informing AAG where the parts should be ordered from (AagLocationId) and based on advisory SLA.

Request

Example Message Request

HTTP Header	Parameter	Value
	customer_id	QKF9999
	verification_id	
JSON Body		<pre>{ "CustomerOrderNumber": "ORDNO12345", "VRM": "FN60KYP", "Products": [{ "ProductId": "NPAPBD8077", "Quantity": 2, "RequestLineId": "QAAG532432/1", "AagLocationId": 451, "ExpectedDeliveryTime": "17:00" }, { "ProductId": "BSCFIL1039", "Quantity": 2, "RequestLineId": "AAGQ7/1", "AagLocationId": 212, "ExpectedDeliveryTime": "13:00" }] }</pre>

NOTE: In this example, NPAPBD8077 has been retrieved using the V2 Quote (resulting in a RequestLineId) but BSCFIL1039 was retrieved using the V1 Quote (on QuoteID AAGQ7)

Data Contract Inbound Request

HTTP Header	Parameter	Type	Multiplicity	Comments
	customer_id	string	required	Customer account reference
	verification_id	string		May be Required depending on integration setup
JSON Body	CustomerOrderNumber	string	required	Customer order number
	VRM	string	optional	Vehicle registration for the order
	Products	[array]	required	Array of products
	ProductId	string	required	AAG unique product Id
	Quantity	int	required	Requested quantity. Ensure AagLocation has sufficient stock
	RequestLineId	string	required	The value obtained from either Quote, Info, or Enquiry messages.
	AagLocationId	int	required	Populate with the AagLocationId provided in the availability object
	ExpectedDeliveryTime	string	required	Populate with the EstDeliveryTime provided in the availability object

Response

Example Message Response

Response Body
<pre>{ "Header": { "SuccessFlag": true, "Message": null, "ErrorCode": null }, "Body": { "SupplierOrderNumber": "8373636", "CustomerOrderNumber": "ORDNO12345", "Products": [{ "ProductId": "DLATA2338", "LocationType": "NDC", "EstDeliveryTime": "14:15 NWD" }] } }</pre>

Data Contract Outbound Response

	Parameter	Type	Nulls?	Comments
JSON Body	Header			
	SuccessFlag	boolean		True or False identifying success
	Message	string	Y	Response description
	ErrorCode	string		Error code
	Body			
	SupplierOrderNumber	string		AAG system generated order reference
	CustomerOrderNumber	string		Customer order reference
	Products	array		
	ProductId			AAG unique product Id / part number
	LocationType			Type of the location (Local, Buddy, RDC, NDC)
	EstDeliveryTime			Estimated delivery calculated from request time . e.g. 14:15 NWD
Response Code		int		Code to identify the quality of the response (200, 201)

5. /api/order/advance

Method Objective

This method is used for Advance (non urgent) orders only. A stock check will NOT be completed by AAG before confirming the order, giving the Customer an opportunity to order out of stock products for future delivery. The integrator should call Product/Info method before the order is placed. This will ensure correct part numbers are ordered.

Pre-requisites

This method assumes that the Customer had obtained product information from Product Infor methods. The Customer is required to provide a date & time of the scheduled job (DateOfAppointment). The date & time gives AAG Telesales a deadline by which ordered product must be with the repairer.

Request

Example Message Request

HTTP Header	Parameter	Value
	customer_id	QKF9999
	verification_id	
JSON Body		<pre>{ "CustomerOrderNumber": "ORDNO12345", "VRM": "FN60KYP", "DateOfAppointment": "2023-03-12T10:45:00", "Products": [{ "ProductId": "NPAPBD8077", "Quantity": 2, "RequestLineId": "QAAG532432/1", "AagLocationId": 451 }, { "ProductId": "BSCFIL1039", "Quantity": 2, "RequestLineId": "AAGQ7/1", "AagLocationId": 212 }] }</pre>

Data Contract Inbound Request

HTTP Header	Parameter	Type	Multiplicity	Comments
	customer_id	string	required	Customer account reference
	verification_id	string		May be Required depending on integration setup
JSON Body	CustomerOrderNumber	string	required	Customer order number
	VRM	string	required	Vehicle registration for the order
	DateOfAppointment	string	required	Date&Time helps AAG Telesales ensure out of stock products are delivered on time
	Products	[array]	required	Array of products
	ProductId	string	required	AAG unique product Id
	Quantity	int	required	Requested quantity. Ensure AagLocation has sufficient stock
	RequestLineId	string	required	The value obtained from either Quote, Info, or Enquiry messages. If necessary the value can be blank.
	AagLocationId	int	required	Populate with the AagLocationId provided in Quote/Quote Classic methods. Value can be a fixed valid value.

Response

Example Message Response

Response Body

```
{
  "Header": {
    "SuccessFlag": true,
    "Message": null,
    "ErrorCode": null
  },
  "Body": {
    "SupplierOrderNumber": "8373636",
    "CustomerOrderNumber": "ORDNO12345",
  }
}
```

Data Contract Outbound Response

	Parameter	Type	Nulls?	Comments
JSON Body	Header			
	SuccessFlag	boolean		True or False identifying success
	Message	string	Y	Response description
	ErrorCode	string		Error code
	Body			
	SupplierOrderNumber	string		AAG system generated order reference
	CustomerOrderNumber	string		Customer order reference
Response Code		int		Code to identify the quality of the response (200, 201)

6. /api/order/stock

Method Objective

This method is used for Stock (non urgent) orders only. A stock check will NOT be completed by AAG before confirming the order with the Customer giving the Customer an opportunity to order out of stock products for restocking.

Pre-requisites

Advice to The Integrator is to call Product/Info methods before stock order is placed. This allows the caller to check in advance that part numbers are valid. The date & time gives AAG Telesales a deadline by which ordered product must be with the repairer.

Request

Example Message Request

HTTP Header	Parameter	Value
	customer_id	QKF9999
	verification_id	
JSON Body		<pre>{ "CustomerOrderNumber": "ABC110315", "ExpectedDeliveryDate": "2023-03-12T00:00:00", "Products": [{ "ProductId": "APEDSK2509", "Quantity": 2 }, { "ProductId": "APEDSK2508", "Quantity": 7 }] }</pre>

Data Contract Inbound Request

HTTP Header	Parameter	Type	Multiplicity	Comments
	customer_id	string	required	Customer account reference
	verification_id	string		May be Required depending on integration setup
JSON Body	CustomerOrderNumber	string	required	Customer order number
	ExpectedDeliveryDate	string		Date&Time helps AAG Telesales ensure out of stock products are delivered on time
	Products	[array]	required	Array of products
	ProductId	string	required	AAG unique product Id
	Quantity	int	required	Requested quantity. Ensure AagLocation has sufficient stock

Response

Example Message Response

Response Body
<pre>{ "Header": { "SuccessFlag": true, "Message": null, "ErrorCode": null }, "Body": { "SupplierOrderNumber": "8373636", </pre>

```

    "CustomerOrderNumber": "ORDNO12345",
  }
}

```

Data Contract Outbound Response

JSON Body	Parameter	Type	Nulls?	Comments
	Header			
	SuccessFlag	boolean		True or False identifying success
	Message	string	Y	Response description
	ErrorCode	string		Error code
	Body			
	SupplierOrderNumber	string		AAG system generated order reference
	CustomerOrderNumber	string		Customer order reference
Response Code		int		Code to identify the quality of the response (200, 201)

7. /api/quote/classic

Method Objective

To present the customer with a list of products and their current availability based on the incoming vehicle registration (VRM) and customer product group (e.g. 82 for Brake Discs). Each response will contain a list of products (as supplied from an industry electronic catalogues) with product details, image, and available stock from AAG.

Pre-requisites

The customer will be using TecDoc GenArt product group ids for product retrieval.

Request

Example Message Request

HTTP Header	Parameter	Value
	customer_id	QKF9999
	verification_id	
JSON Body		{ "ProductGroupCodes": ["273"], "VRM": "YX12WTF", "IncludeVehicleDetails": true }

Data Contract Inbound Request

HTTP Header	Parameter	Type	Multiplicity	Comments
	customer_id	string	required	Customer account reference
	verification_id	string		May be Required depending on integration setup
JSON Body	CustomerProductGroup	Array list	required	One or more GenArts. NOTE: requesting multiple GenArts will affect response speed.
	VRM	string	required	Vehicle registration
	IncludeVehicleDetails	boolean		Not required

Response

	IsKit	boolean		Not yet available
	ProductRating	string		Premium/Standard/Budget
	ProductDetails	array list		A list of Key Value pairs (as per product catalogue)
HTTP Response Code				

8. /api/servicetimeandparts (no longer supported)

This method will be replaced with a more advanced and faster alternative!

Method Objective

To present the customer with a Sequence of Repair Tasks with a list of product options against their current availability based on the incoming vehicle registration (VRM) and customer product group (e.g. Brake Discs). Each response will contain an array of matching articles (as supplied from industry electronic catalogues) with product options available from AAG. Each product option will contain availability information from appropriate locations across our network.

At present there are 2 Levels of Services

Full Service ServiceId "1"

Interim Service ServiceId "2"

Pre-requisites

This method assumes the customer has already agreed the Service Level, the sequence will trigger a repair task that will generate TecDoc GenArt product groups for product retrieval.

Request

Example Message Request

HTTP Header	Parameter	Value
	customer_id	QETB01
	verification_id	
JSON Body		{ "VRM": "YR64VJP", "ServiceID": 1, "IncludeVehicleDetails": false }

Data Contract Inbound Request

HTTP Header	Parameter	Type	Multiplicity	Comments
	customer_id	string	required	Customer account reference
	verification_id	string		May be Required depending on integration setup
JSON Body	ServiceID	int	required	Service Level
	VRM	string	required	Vehicle registration
	IncludeVehicleDetails	boolean		true/false, currently not used

Data Contract Outbound Response

	Parameter	Type	Nulls?	Comments
JSON Body				
	Header			
	SuccessFlag	boolean		True or False identifying success
	Message	string	Y	Response description
	ErrorCode	string	Y	Error code
	Body			
	RequestID	string		A unique Job request is created
	Service	array		A list of repair/job Sequences related to the ServiceID
	Sequence	int		Sequence Number triggers a Repair Task
	RepairTask	string		Repair Task triggers a part search for VRM
	RepairTime	double		
	ProductGroup	string		
	ProductOptions	array		A list of Articles need to complete the Sequence
	Articles	[array]		Array of articles meeting the criteria of in the inbound request
	ArticleProvider	string		Supplier providing article details
ArticleDescription	string		Primary article description	
CustomerProductGroup	[array]		An Array of one or more GenArts.	
FittingPosition	string		Fitting position	
AutocatProductGroup	string		The mapped Autocat group against CPG	
ImageUrl	string		Public URL of the image	

	ArticleProperties	[array]		Array of article properties. Present in a grid/table format
	Name	string		Name of the property
	Value	string		Value of the property
	ProductOptions	[array]		List of products available to order for the article
	RequestLineId	string		A unique line level quote ref. Should be returned in Purchase Order (on-demand message).
	DisplayOrder	int		Recommended display order of products to the customer
	ProductId	string		AAG unique number for the product
	Brand	string		Brand of the product
	BrandRating	string		AAG Brand rating of the product (Premium, Standard or Budget)
	CustomerPartNumber	string	Y	Customer's part number if known
	CustomerLockoutRating	string		A flag to indicate if product is sellable to the customer. Currently specific to Autopart. Example values: "OK FOR SUPPLY", "Unknown".
	RecMinOrdQty	int		Customers should round to this when ordering (unit of issue)
	CostPrice	double		Price of the product to the customer
	Availability	[array]		Array of stock availability across AAG for the product option
	AagLocationId	int		Unique AAG id for the location
	AagBusinessUnit	string		Business unit of the location (Subs, FPS, Apec or Platinum)
	BranchCode	string		Newcastle
	LocationName	string		Friendly name of the location
	LocationType	string		Type of the location (Local, Buddy, RDC, NDC)
	QtyInStock	int		Total qty in stock of the product option
	EstDeliveryTime	string		Estimated delivery calculated from request time
	Priority	int		See below section
	VehicleDetails	[array]		Currently not used. Default value NULL
	Vrm	string		Vehicle Registration Number
	Vin	string		Vehicle Identification Number
	EngineNo	string		Engine Number
	EngineSize	string		Engine Capacity
	Fuel	string		Type of Fuel
	Make	string		Vehicle Make
	Model	string		Vehicle Model (Long)
	YearOfManufacture	string		Year of Manufacture
	DateRegistered	string		Date Registered
HTTP Response Code		int		Code to identify the quality of the response (201=OK, 200=Error)

Error codes

Error Code	Description
ISE0001	Message: Input parameters are null and invalid
ISE0002	Message: Product lookup failed. Please check the supplied lookup values and try again
ISE0004	Message: Invalid branch location - 0
ISE0005	Message: Vehicle lookup returned invalid response, please check VRM is correct
ISE0006	Message: No products found for entered details, please check input
ISE0011	Message: There were no parts found for this vehicle
